

#### **WORLD KIDNEY DAY 2022 REPORT**

- Dr Kalaivani Ganesan

## A) CME at peripheral settings:

On the occasion of **World Kidney Day** celebration we had series of events at different locations of our state (Tamil Nadu, India) towards peripheries so as to educate all general pediatrician's and trainees on early diagnosis of kidney disease. We had a day long CME with the help of local pediatrician/ Nurses in the community on"**What is the Role of pediatrician's in preventing kidney disease**" with target audience being pediatricians, pediatric trainees, dietitians & social workers .**The concept of world kidney day** "**Kidney Health for All-Bridge the knowledge gap for better kidney care**" was introduced and executed.

## B) Awareness talk at School and at our outpatient department:

An delightful day was spent with school students as a part of world kidney day celebration - Teaching the students on early symptoms of kidney disease and the need to consult a doctor .Pamphlets were distributed to students ,teachers and parents which has the content of: **How to keep your kidneys healthy and when your child needs to meet a kidney doctor**. This activity was welcoming among parents and was well attended by more than 250 students in batches and all their queries were answered. "The objective of organizing this event is to increase education and awareness about effective symptom management and patient empowerment, with the ultimate goal of encouraging meaningful participation in every-day life."

# When your child need to meet kidney specialist?

- > Abnormal Kidney Size
- > Urinary symptoms like increased or decreased frequency of urination, blood in urine, frothy urine and pain
- > Recurrent fever with urinary symp
- > Failure to gain adequate weight and height
- > Night Time Bedwetting ( > 7 years of age)

**Awareness talk** at school addressing students, teachers and parents on symptoms of kidney disease.

Drilling a thought on how a simple blood pressure check and urine routine testing helps in early diagnosis.

Sensitizing every individual of the world population on these preventive measures is one of the goals to prevent kidney diseases.

#### At our outpatient department:

Awareness talk by our dynamic nephrology fellows on the occasion of world kidney day with a theme "kidney diseases and how do we catch them early"

### C) Interview with Media on renal ailments: Answering the public queries

An hour long live interactive session was hosted by a local media I to clear the doubts, misconceptions regarding kidney and it's diseases. They were also advised on healthy life style.

There was a dynamic interaction between parents and a renowned nephrologist Dr Georgi Abraham about their journey with us. The programme was extremely beneficial to all participants and this wouldn't have been possible with out the trust and support from the patients and their family.

## D) Move your feet to stay away from kidney disease - Walkathon at shore

Awareness walkathon held on March 13<sup>th</sup> Sunday in beach involving school, college students,doctors,nurses,dialysis technicians and general public was held. A walk of 3 km was carried out holding banners, placards with the theme of world kidney day and raising slogans on kidney awareness. This event was flagged off by film maker and few actress which had an extensive coverage in social media. All volunteers were given certificates as a token of appreciation.
